

Your Organisation's Private AI

Local AI for Enterprise Knowledge, Development & Automation

InsideMind.ai gives your organisation its own AI platform, running securely on dedicated hardware you own and control.

Instead of paying ongoing subscription and token charges to public AI services, your organisation has unlimited access to a private AI that understands your organisation, protects your intellectual property and grows more valuable every day.

InsideMind.ai combines enterprise knowledge, intelligent document search, AI-powered software development and automation into one turnkey solution that staff access through a secure web browser.

Reduce AI costs. Protect your knowledge.

No software installation. No AI expertise. No dependence on public AI providers.

Unlock Your Organisation's Collective Knowledge

Every organisation creates valuable knowledge every day.

The challenge is capturing it, organising it and making it instantly accessible to the right people.

Policies, contracts, emails, proposals, procedures, manuals, project documentation and years of accumulated experience are often spread across file servers, email systems and shared drives.

InsideMind.ai transforms this information into a secure organisational knowledge base that staff can search simply by asking questions in plain English.

Instead of searching folders or interrupting colleagues, staff simply ask:

- What is our travel policy?
- Show me the latest supplier agreement.
- Summarise last year's proposal for ABC Ltd.
- Which procedure covers equipment maintenance?

Answers come from your own information - not the public internet.

Knowledge That Stays Current

A knowledge base is only valuable if it's continually updated.

InsideMind.ai makes contributing knowledge almost effortless.

Staff simply forward documents or emails to InsideMind.ai's dedicated email address or upload files through the web portal. Because adding information is as easy as sending an email, staff naturally contribute knowledge as part of their normal workflow.

InsideMind.ai automatically captures and indexes:

- PDF documents
- Microsoft Office files
- Email attachments
- Email content
- Shared folders
- Scanned documents (OCR)
- Technical documentation
- Project repositories

Secure verification keys and administrator-controlled permissions ensure only authorised users can contribute information, maintaining the quality and integrity of your organisation's knowledge.

Build Applications in Hours

A browser-based AI development workspace.

InsideMind.ai acts as a virtual software developer with a deep understanding of your organisation.

Because it has access to your organisation's terminology, documentation, standards and processes, it develops software that reflects how your organisation actually operates.

Staff can rapidly create internal applications such as:

- Approval workflows
- Reporting dashboards
- Booking systems
- Customer portals
- Inventory management
- Operational forms
- Process automation
- Organisation integrations

Staff simply describe what they need in plain English and work with the AI to build practical applications in hours instead of weeks.

Applications can be published securely within the **InsideMind.ai Apps Workspace** for internal staff or deployed to cloud platforms such as AWS for public-facing solutions.

One Platform. Every Department.

InsideMind.ai delivers value across your entire organisation.

Executive Leadership - Makes faster, better-informed decisions using the knowledge of the entire organisation.

Finance - Identifies spending trends, uncovers cost-saving opportunities, analyses contracts and financial reports, and delivers faster organisation insights.

Sales - Uncovers previous proposals, customer history, pricing strategies and new opportunities.

Human Resources - Supports staff onboarding, policies, performance management and workplace issues with instant access to organisational knowledge and history.

Because employees already understand how to use conversational AI, adoption is immediate. They simply open their browser and ask questions naturally.

Every answer provided by InsideMind.ai is one less email, phone call or interruption for another employee.

Over time, InsideMind.ai quietly becomes one of the most valuable productivity tools in the organisation.

Access is fully controlled by your organisation, allowing administrators to define who can view information and who can contribute new knowledge.

Secure By Design

InsideMind.ai operates entirely on infrastructure dedicated to your organisation.

Your knowledge remains under your control and can continue operating even without an internet connection.

- Organisation-owned infrastructure
- Secure intranet web access
- Optional offline operation
- Enterprise access controls
- No dependence on public AI services
- Intellectual property remains inside your organisation

Your organisation owns both the infrastructure and the intelligence.

Performance Designed for Peace of Mind

InsideMind.ai is delivered as a complete turnkey appliance including:

- Dedicated AI appliance
- Secure browser interface
- Enterprise knowledge platform
- Intelligent document search
- AI software development workspace
- Automated document ingestion
- Workflow automation
- Monitoring dashboard
- Backup and recovery

Systems are tailored to suit each organisation based on user numbers, document volumes and AI workloads.

The platform can be maintained by your existing IT team or fully managed by InsideMind.ai through a tailored support agreement covering updates, AI model improvements, monitoring and optimisation.

Why Own Your AI?

Every organisation is rapidly becoming dependent on AI.

The question is whether that intelligence belongs to your organisation or to someone else.

Public AI services require a heavy reliance on infrastructure, pricing, policies and long-term decisions outside your control.

As AI becomes embedded in everyday operations, that dependency becomes a strategic risk.

InsideMind.ai takes a different approach.

Your organisation owns the hardware.

Your organisation controls the knowledge.

Your organisation decides how AI is used.

Instead of renting intelligence, you're building a permanent asset that becomes smarter and more valuable as your organisation grows.

Typical Benefits

- ✓ Eliminate or significantly reduce AI subscription and token costs
- ✓ Give every employee instant access to organisational knowledge
- ✓ Reduce time spent searching for information
- ✓ Reduce internal emails and interruptions
- ✓ Build internal applications dramatically faster
- ✓ Protect intellectual property and confidential information
- ✓ Keep AI entirely under your organisation's control
- ✓ Create a permanent AI capability that grows with your organisation

Why Organisations Choose InsideMind.ai

Many AI solutions solve only part of the problem. Some provide excellent conversational AI but rely on ongoing subscriptions and cloud infrastructure. Others offer enterprise search or automation but require multiple products to achieve a complete solution.

InsideMind.ai brings these capabilities together in a single, organisation-owned platform that combines secure knowledge management, AI-assisted software development, intelligent automation and browser-based access for every employee. Rather than renting AI capability from multiple providers, your organisation builds a permanent AI asset that becomes more valuable as your knowledge and usage grow.
